Quiz #4  Write full name, ID

What type of sampling (simple random, stratified, cluster, or systematic) is represented by each of the following?

1. An airline company made a list of all its flights and randomly selected 25 flights. All passengers on these flights were asked to fill out a survey.

2. A university divided employees into three categories: Staff, faculty, and student employees. A random sample was selected from each group and they were telephoned and asked their opinions.
